TRUST & SAFETY OPERATIONS | POLICY ENFORCEMENT | QUALITY & AI EVALUATION

marpureddysindhu@gmail.com | +91 99630 51765 | Pune, India | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Trust & Safety professional protecting users on Google, Meta and GitHub: investigating account takeover, fraud, CSAM, NCII and coordinated abuse, authoring the policies and playbooks that enforce against it, and building the quality systems that keep enforcement consistent. Led quality for a 108-member multilingual vendor team, designed evaluation frameworks that lifted review accuracy by 25%, and now evaluates AI-agent output for hallucinations and failure modes. B.Tech in Computer Science.

CORE STRENGTHS

Abuse investigations (account takeover, phishing, crypto fraud, adult content, synthetic media abuse, discriminatory speech, disinformation, impersonation, misuse of PII, violent speech, CSAM, NCII, TVEC, coordinated abuse, OSINT) | **Policy & playbook authoring** | **Quality, calibration & evaluation frameworks** | **Vendor quality & SLA management** (Meta-QC, audits) | **AI safety evaluation** (golden datasets, hallucinations, failure modes) | **Cross-functional escalations** (Engineering, Legal, Security, Threat Intelligence)

PROFESSIONAL EXPERIENCE

Legal Analyst - AI Governance & Legal Operations — **CrowdStrike** | **June 2026 to Present**

- Created audit-ready defect records for an internal AI agent by building a golden-dataset QC framework that scores output for accuracy, hallucinations and failure modes, tracing recurring defects to root cause.
- Replaced the manual policy tracking library across every legal practice area by building **Sage** (using Google Apps Script), a virtual policy librarian that reports each policy's owner, last update and next review date on demand.

Senior Intelligence Consultant — **ALICE, formerly ActiveFence** | **March 2026 to April 2026**

- Delivered early-warning intelligence for a Rapid Alert Team covering India by synthesizing cross-platform signals through OSINT, threat hunting and narrative forensics.

Trust and Safety Specialist II — **GitHub (Microsoft)** | **April 2021 to January 2026**

- Resolved 500+ escalations a year by investigating account takeover, malware, phishing, crypto fraud, TVEC, CSAM, NCII and coordinated abuse on a large open-source platform.
- Improved review accuracy by 25% and cut high-risk turnaround by 20% by designing AI moderation evaluation frameworks measuring accuracy, precision, false-positive rate and TAT.
- Reduced incident resolution time by 30% by leading high-severity escalations across Engineering, Legal and Security.
- Strengthened detection and platform safeguards by turning abuse patterns into 50+ improvement plans with Engineering, Security and Threat Intelligence.
- Standardized account-takeover response by authoring SOPs on the tell-tale signs of compromised accounts and a remediation playbook for restoring them.
- Turned emerging abuse into enforceable workflows by writing policy and playbooks on synthetic media and on email spoofing used to impersonate users and violate copyright.

Process Developer (Trust and Safety Quality Analyst) — **Facebook via Spectraforce & Genpact** | **May 2015 to April 2021**

- Lifted CSAT by 5% by designing a moderation process for verbally abusive content, after leading end-to-end error-trend analysis with the client.
- Made automation 10% faster by building a market-context repository that helped an India-based team interpret North American trends and keep error rates low.
- Achieved 98% satisfaction with an error rate below 2% on impersonation and abusive-behavior review.
- Owned market quality for the South Asian and North American markets on business-critical user-safety and fraud processes, presenting quality, error trends and actions to client leadership in weekly and monthly business reviews.
- Held a 108-member vendor team across English, Hindi and Odia workflows to Meta-QC accuracy and SLA targets; ramped new hires on time and lifted bottom-quartile performers through the Revive program.
- Kept Operations, Policy and Quality aligned by running weekly calibration and error-review sessions, turning error trends into a quality-improvement roadmap and partnering with Training and Policy on policy changes.

Process Associate, Geo Operations — **Google Maps via Randstad / Minvesta** | **November 2012 to April 2015**

- Protected privacy in Street View imagery by detecting and blurring license plates, street signs and other identifying details on the Street Smart team.
- Scaled onboarding for a growing floor by creating reusable training material and an operator performance grid; mentored and quality-controlled new hires.

SELECTED PROJECTS

Argus - Real-time operational newspaper aggregating risk signals across 15 categories into one view.

FatiGat - Surfaces reviewer fatigue and cognitive-overload signals that degrade moderation quality and wellbeing.

OctoMask - Privacy tool that reduces unnecessary exposure of identity and personal data on developer profiles.

ReflectoCat - Analyzes communication tone and behavioral signals in GitHub activity.

EDUCATION & CREDENTIALS

B.Tech, Computer Science Engineering, BPUT | CGPA 7.3 | **Lean Six Sigma Yellow Belt** | Languages: English, Odia, Hindi, Telugu
